LAB 6

1. Marks Percentage, Division Classification (Exp 9).

Write an F# program that:

(1) reads marks for four subjects, computes the percentage, determines the division using pattern matching — ≥60 → First Division, 50–59 → Second Division, 40–49 → Third Division, <40 → Fail;

```
Exp9_MarksDivision_FSharp > Program.fs

printf "Enter marks for Subject 1: "
let m1 = float (System.Console.ReadLine())

printf "Enter marks for Subject 2: "
let m2 = float (System.Console.ReadLine())

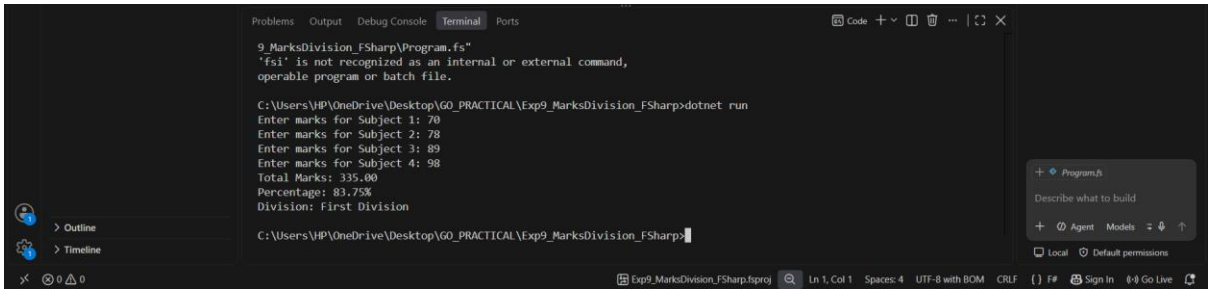

printf "Enter marks for Subject 3: "
let m3 = float (System.Console.ReadLine())

printf "Enter marks for Subject 4: "
let m4 = float (System.Console.ReadLine())

let total = m1 + m2 + m3 + m4
let percentage = total / 4.0

let division =
    match percentage with
    | p when p >= 60.0 -> "First Division"
    | p when p >= 50.0 -> "Second Division"
    | p when p >= 40.0 -> "Third Division"
    | _ -> "Fail"

printfn "Total Marks: %.2f" total
printfn "Percentage: %.2f%%" percentage
printfn "Division: %s" division
```

```
